

Task: find 3 figures and criticize using checklist

I have only mentioned the failed checkpoints from the checklist.

The figures display raw observations only and do not present summary statistics or parameter estimates, I did not highlight the absence of confidence intervals as an issue.

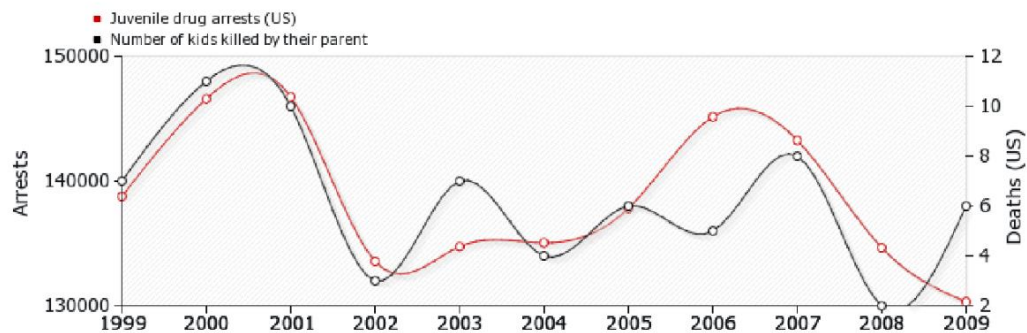

Figure 1:

Problems:

- Axes oriented correctly: Reversed (extremely misleading!), not clearly justified
- Axes identified and labelled: decades instead of years are harder to grasp
- Readable on print/screen: printing so much ink is unnecessary

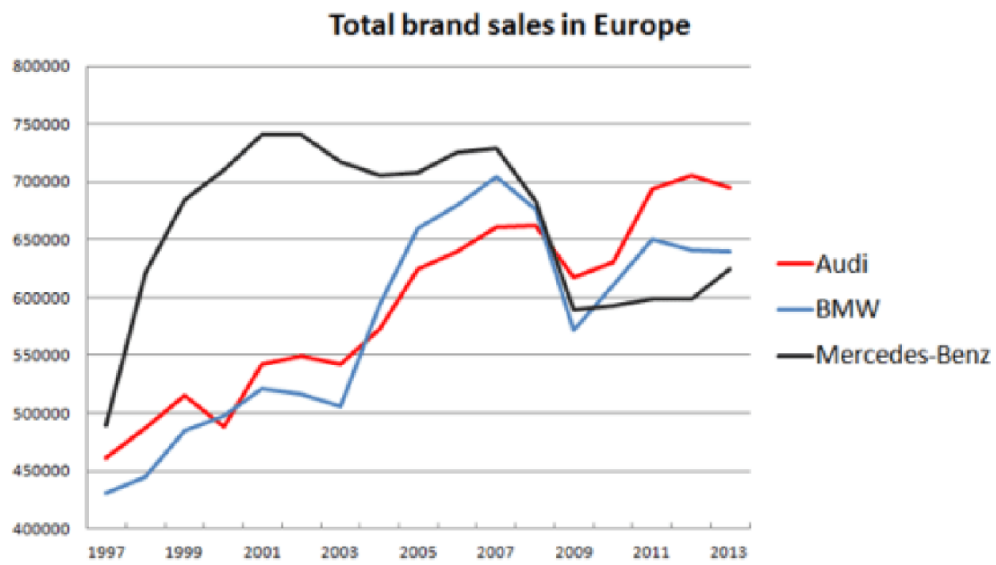

Figure 2:

Problems:

- Color range: not colorblind friendly
- Scales and units explicit: right y-label is not explicit (also why is US once in the title once in the label)
- Origin (0,0) or justified: not justified (on both scales!!)
- Curves on same scale: misleading
- dual y-axis is misleading, they should be on separate graphs
- No title present
- No source

Figure 3:

Problems:

- Standard color range: not colorblind friendly
- Axes identified and labelled: no labels, no units
- Origin (0,0) or justified -> not justified
- No source
